

## Get Ergonomic and Economic Spas from Dr Wellness

Dr. Wellness is a highly respected manufacturer specializing in models featuring ergonomic seating. There have never been Dr. Wellness complaints regarding this.

When you buy a hot tub, you need to inspect its seating arrangement. You must analyze how comfortable you will be sitting in the hot tub. You must have sufficient space moving about in the spa.

The hot tub should provide you an easy way to recline and relax. The seats should be adequately longer to support people of all heights, except the exceptionally tall ones.

## Customizable Hot Jets

Dr. Wellness spas possess water jets that let you adjust them. These water jet massagers can be oriented in multiple directions. Do not buy a hot tub with rigid water jets. This is because you will not have an optimum hydromassage experience.

Recent reviews of hot tubs have indicated the low noise of the components in hot tubs manufactured by Dr. Wellness. Complaints are popular on other manufacturers regarding this aspect. Consider this carefully, for if the water jets are noisy, your idea of a quiet and relaxing experience in a hot tub goes down the drain, literally.

Don't buy a hot tub that has too many water jets. The placement and the number of water jets used in a spa should be optimized. Too many jets could use more electrical energy than necessary.

## Water Quality

Check for the manufacturer's instructions on how to maintain the water quality in the spa. Some manufacturers recommend Ozone purifiers to reduce the chemical composition in the water.

Identify the filtration system and how it works. If the filtration has multiple steps, then this is an indication that the water is purified at multiple levels. Filters should be easily accessible and easy to replace. The manufacturer should have clear-cut instructions on the lifespan of a filter and how to maintain one.
